- As an unregistered user, I should be able to view available items.
 - Case 1: Successfully view available items
 - Click on “Recipes”.
 - Display available recipes.
- As an unregistered user, I should be able to view available items details.
 - Case 1: Successfully view available items details.
 - Click on the item name displayed by search result.
 - Redirect to item view page.

Concern/Issue/Bug

Concern

- When adding item, if I click on "receive online payment" checkbox, I have taken to my profile edit page and after successfully updating my paypal email I have taken to landing page, Instead of taking me to add item form since i was initially trying to add item.
- If I have already subscribed to a plan using paypal, why do I need to add paypal email in email?
- Error page when placing order by customer.
- I have added 100 user, 200 item and 200 meals, and the searching and sorting the items and meal was very slow.
- After sorting, when i hover over the search result this does not displays the popup on location in map.
- Event if i am logged in, there are links "Log in as a Cook" and "Log in as a Customer" in the footer.
- While log in as cook I cannot ask about food items to cook. But I can ask question to cook from meal view page

Issues

- While singing in with cook “Send-message” button still dis-able even after filling up the form.
- While singing with both “Add new items” placeholders in item name/s.
- The image of hosted meal is not displayed properly in safari.
- After click on the password reset confirmation user should redirect.

- Even after activating subscription by cook. System is still asking for paypal account to add items.
